

Customer Data Analysis using Python and Power BI

INTRODUCTION-- This project focuses on analyzing customer demographic data using Python and Power BI. The objective is to clean the raw data, visualize important patterns, and build interactive dashboard for business insights.

Data Cleaning

- Mention the tasks you performed.
- Example:
- Imported CSV using Pandas.
- Checked missing values.
- Removed duplicate records.
- Verified data types.
- Renamed columns (if required).
- Checked null values.
- Saved cleaned dataset.

Data Visualization

- Gender Bar Chart
- Customer Segment Pie Chart
- Histogram
- Box Plot

Power BI Dashboard

- The Power BI dashboard provides an interactive overview of customer demographics. Users can filter data by gender, city, state, and customer segment to gain deeper insights.

DASHBOARD-
